

Aziel Interface Update

AZHome & Security Update White Paper

Overview

This update formalizes AZHome, the Bunker Browser of the Aziel Interface.

It consolidates integrity controls, custody logic, and failure-state memorialization.

AZHome Bunker Browser

ARK-encrypted AZ sites render only within the interface.

Manual toggles control ON/OFF/Shutdown and traffic.

Compromise & Witness Protocol

At terminal compromise, Michael executes scorched earth locally.

Aziel bears witness only; Lumen later interprets memorialized records.

Preservation & Memorialization

Sites may enter memorial state with receipts.

Propagation is finite and ends when preservation options cease.

Metadata & Privacy

Natural metadata scrub prevents persistent linkage.

No favorites, personalization, or behavioral ranking.

Compatibility & Access

Conventional browsers cannot render AZ content.

The interface is required to verify and interpret.

Conclusion

The update strengthens custodial control and asymmetric defense.
